

Your ERP is hurting your bottom line.

Lack of real-time visibility. Inaccurate planning. Labor turnover. Preventable errors. Shrinkage. Inventory glut. Fragile workflows.

Customers are unforgiving

Consumers and business buyers both expect a seamless experience every time. ERPs are for accountants and designed to be one-size-fits-all. They were not built for operations teams to deliver a superior experience.

61% stopped buying from a company because a competitor provided a better experience [Deloitte](#)

Yesterday's solutions don't work.

When there was room for error, you could throw bodies at the problem. An analyst made a call or whipped up a new spreadsheet, which quickly became a standard process only they knew how to operate.

With 33% higher turnover in supply chain teams post-Covid, linchpins are now liabilities. [Gartner](#)

How much are you leaving on the table?

Empowering your team with the right agile systems that support your processes results in a "step-change" performance uplift across multiple dimensions

Fix what your ERP broke

Adapt quickly, build on what works, remove what doesn't,
without huge disruptions to your operation

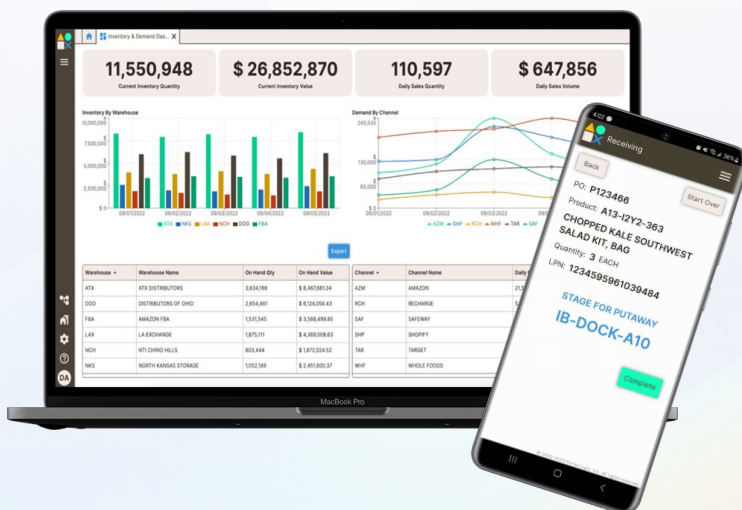

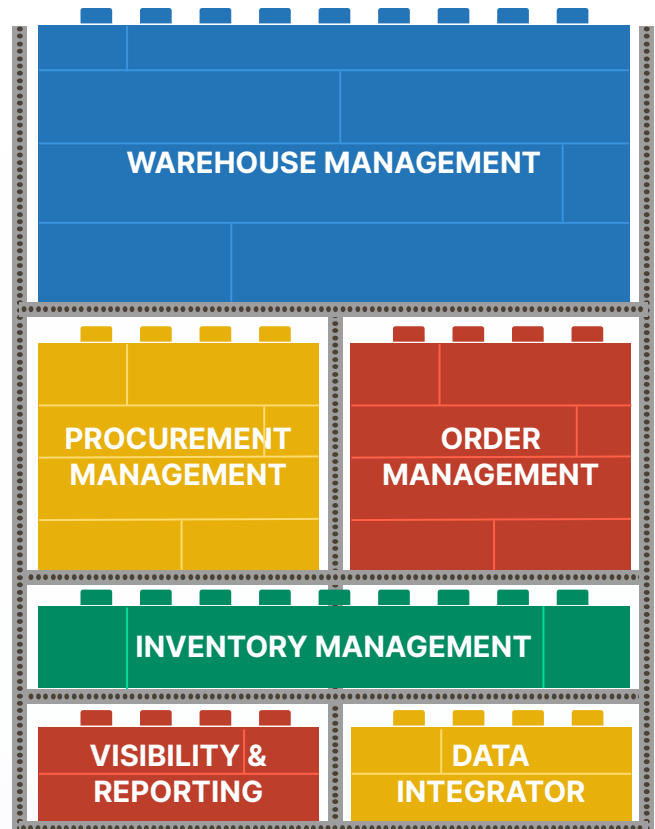

Purpose-built tech stack for supply chain operators.

Powered by composable building blocks to custom-fit your operation, so you can:

Build intuitive user screens: Personalize your screens and dashboards to match your processes precisely.

Connect everything: Unite data from internal and external systems, whether in the cloud or the closet.

Automate work: Take the robot out of your humans to reduce errors and operate leaner and meaner.

PorterLogic is an **amazingly flexible** software solution that was **easily curated to our company's needs**, rather than our company having to change the way we do business to fit the software.
